

Transition Project

BIOLOGY

Unlike most subjects, Biology uses a dedicated AQA Bridging Work Booklet rather than a separate transition sheet. The booklet has been produced by AQA and has been selected by our Biology department to help prepare you for the demands of A-level Biology. Please download the booklet using the link below and complete all of the required activities before you start the course in September.

The booklet includes:

An introduction to the A-level Biology course and how it is assessed.

Scientific vocabulary used throughout A-level Biology.

Essential mathematical skills, including SI units, prefixes and data conversions.

Practical and investigative skills, including planning experiments and analysing results.

Data handling, graph interpretation and statistical calculations.

Extended writing activities to develop exam technique.

GCSE knowledge refreshers covering key topics such as cells, microscopy, cell division and transport across membranes.

Biology Bridging Work Booklet:

If you have any questions or need any support with your transition work, please contact your subject teacher using the email address below.

We hope you enjoy the tasks and look forward to welcoming you to Glossopdale Sixth Form in September.
